A; Molecule type: protein
A; Residues: 1-289 <FRA>,
A; Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch
A; Note: this protein lacks most of the V region and all of the CH1 region. Residue 12
A; Note: this protein lacks most of the V region and all of the CH1 region. Residue 12
A; Note: the sequence of residues 42-76 was taken from the reference that follows
B; Michaelsen, T.E.; Frangione, B.; Franklin, E.C.
J. Biol. Chem. 252, 883-889, 1977
A; Title: Primary structure of the 'hinge' region of human IgG3. Probable quadruplicat
A; Reference number: A92219; MUID: 77118561
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A; Contents: normal gamma-3 chains, sequence corresponding to residues 12-97 of protein A; Accession: A9219
A; Molecule type: protein A; Residues: 12-97 AIIC>
A; Note: the hinge region in gamma-3 chains is about four times as long as in other gampa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A; Molecule type: protein A; Residues: 59-125, EB', 128-226, 228-289 < MOL>

Ig gamma 4 chain constant region - pig (fragment)
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C;Accession: 147162
J. Immunol. 153, 3565-3573, 1994
A;Title: Five putative subclasses of swine IgG identified from the cDNA sequences of A;Reference number: 147158; MUID:95015845
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cDNA sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

J: Immunol. 153, 3565-3573, 1994
A; Title: Five putative subclasses of swine IgG identified from the cDNA sequences of a shacession: 147160
A; Reference number: 147160
A; Reference number: 147160
A; Returs: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-328 < KAC>
A; Cross-references: EMBL: U03780; NID: 9433125; PIDN: AAA52218.1; PID: 9433126

Sequence 2, Application US/08477460B

Patent No. 6034223

GENERAL INFORMATION:
APPLICANT: Progenics Pharmaceuticals, Inc.
ATILE OF INVENTION: NON-PEPTIDYL MOIETY-CONJUGATED
TITLE OF INVENTION: CD4-GAMMA2 AND CD4-1gG2 IMMUNOCONJUGATES, AND USES THEREOF
CURRESPONDENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: 30 Rockefeller Plaza
CITY: New York
STATE: New York
STATE: New York

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Allaway, Graham P.
APPLICANT: Allaway, Graham P.
APPLICANT: Allaway, Graham P.
APPLICANT: MIGHON, Paul J.
TITLE OF INVENTION: Immunoconjugates and Uses Thereof
FILE REFERENCE: 41215-A-PCT-US
CURRENT PILING DATE: 1996-06-10
EARLIER APPLICATION NUMBER: PCT/US93/07422
EARLIER FILING DATE: 1993-08-06
EARLIER FILING DATE: 1993-08-07
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GENERAL INFORMATION:
APPLICANT: Progenics Pharmaceuticals, Inc.

Patent No. 5914112
GENERAL INFORMATION:
APPLICANT: Bedinar, Martin M.
APPLICANT: Thomas, G. Roger
APPLICANT: Gross, Cordell E.
TITLE OF INVENTION: ANTI-CD18 ANTIBODIES IN STROKE
NUMBER OF SEQUENCES: 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PLINE CALLS: 1933000

A,Molecule type: DNA
A,Residues: 1-372 <ELLD.
A)Residues: 1-372 <ELLD.
A)Rote: the sequence was determined from the germline gene
B,Note: the sequence was determined from the germline gene
B,Note: the sequence was G.H.; De Vries, G.M.; Milstein, C.
Biochem. J. 117, 33-47, 1970
B,Till: Human immunoglobulin sublclasses. Partial amino acid sequence of the constan A,Reference number: A90249; MUID:70207560
A,Reference number: A90249; MUID:70207560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C. Superfamily: immunoglobulin C region; immunoglobulin homology C: Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin F: 20-85/Domain: immunoglobulin homology <IMI>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ig gamma-4 chain C region - human C;Species: Homo sapiens (man) C;Species: Homo sapiens (man) C;Decies: Homo sapiens (man) C;Decies: 0.2-Apr-1982 #sequence_revision 02-Apr-1982 #sequence_revision 02-Apr-1983; A90249; A02150 C;Accession: A90933; A90249; A02150 DNA 1; 11-18, 1981
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        F:134-203/Domain: immunoglobulin homology <IM2>

C; Species: Homo sapiens (man)
C; Date: 31-Dec-1979 #sequence_revision_23-Oct-1981 #text_change 16-Jul-1999
C; Accession: A90442; A9219; A90198; A93915; A02149
B; Frangione, B.; Rosenwasser, E.; Peralli, F.; Franklin, E.C.
Biochemistry 19, 4304-4308, 1980
A; Title: Primary structure of human gamma3 immunoglobulin deletion mutant: gamma3 hea A; Reference number: A90442; MUID: 81021548
A; Contents: heavy chain disease protein Wis
A; Accession: A90442
A; Molecule type: protein
A; Residues: 1-289 <FRA>
A; Residues: 1-289 <FRA>
A; Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch A; Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch A; Note: the sequence of residues 42-76 was taken from the reference that follows
B; Note: the sequence of residues 42-76 was taken from the reference that follows
B; Note: the sequence of residues 42-76 was taken from the reference that follows
B; Note: the sequence of residues 2-76 was taken from the reference that follows
B; Note: the sequence of residues 3. 1977
B; Diol. Chem. 252, 883-889, 1977
A; Title: Primary structure of the 'hinge' region of human 1gG3. Probable quadruplicat
A; Rocession: A92219
A; Mulecule type: protein
A; Residues: 12-97 <AMIC>
A; Note: the hinge region in gamma-3 chains; sabout four times as long as in other games and a protein and a part for a far a position of a part for miton and a position and a part for a far a far a position and a part for a far a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Molecule type: protein

"Nucleotide sequences of gene segments encoding membrane domains of procedule sequences of gene segments encoding membrane domains of proc. Natl. Acad. Sci. U. S.A. 79:2633-2627(1982).

-I- ALTERNATIVE PRODUCTS: CELL LINES PRODUCING IGG CONTAIN TWO MRNA SPECIES FOR IG GAMMA CHAINS. THE MAJON SPECIES ENCODES SECRETED GAMMA CHAINS. A LESS ABUNDANT SPECIES APPEARS TO ENCODE MEMBRANE BOUND CHAINS IN THAT IT CONTAINS AN ALTERNATIVE 3' END, ENCODED IN SEGMENT OF MU CHAINS. THAT IS HOMOLOGOUS WITH THE MEMBRANE-BOUND SEGMENT OF MU CHAINS.
                                                                                       Mus musculus (Mouse).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
A chimeric antibody (AAW14933) comprises the Cl and hinge regions of human IgG2 and the C2 and C3 regions of human IgG4 (G2/G4 MAD) and a murine anti-porcine soluble vascular cell adhesion molecule (VCAM) monoclonal antibody (MAD) 2A2 heavy chain variable region sequence (see also AAW14932). The chimeric antibody is specific for porcine VCAM. It is useful for diagnosing human rejection of porcine central and for improving xenotransplants and for improving xenotransplantation of porcine cells, tissues and organs into human recipients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 APPVAGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTKP 60
                                                                                                                                                                                                                                                                                                                                                                        Antibodies binding to porcine but not human cell interaction proteins - useful to treat and assay for rejection of xenografted porcine organs, tissues or cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xenotransplantation; graft rejection; cell interaction; pig; vascular cell adhesion molecule; VCAM; monoclonal antibody;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                 This sequence represents the mutated CH2 molecule Gldeltaab, and is a binding molecule of the invention. The recombinant binding molecule is capable of binding a target molecule without triggering complement dependent lysis, or the cell-mediated destruction of the target complement comprises: (a) a binding domain capable of binding a target molecule; and (b) an effector domain that is homologous to all or part of a constant domain of a human immunoglobulin G (IgG) heavy chain. The binding molecule is used to bind a target molecule (especially FegammaRIID catabilition of B cell activation, mast cell degranulation or phagocytosis). The binding molecule can be used to prevent or inhibit the binding molecule (a) an antibody, to the target colleding inhibitation of B cell activation, be used to prevent or inhibit binding of a second binding molecule, e.g. an antibody, to the target colleding and activation in the treatment of inhibit the binding molecule is useful for the treatment of graft-vs-host disease, organ transplant rejection, bone-marrow transplant rejection, autoimmune thrombocytopaenia and arthritis), alloimmunity (e.g. foetal/neonatal alloimmune thrombocytopaenia, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN cornary artery occlusion). The binding molecules do not activate complement or trigger cytotoxic activities through Fegamma and cornary artery occlusion). The binding molecules do not activate complement or trigger cytotoxic activities through Fegamma and allergy with behing able to cross the human placenta through interaction with FCRN which is consistent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                           Immunoglobulin-derived binding molecules that do not activate complement or trigger cytotoxic activities and maintaining desirable immunoglobulin properties -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 APPVAGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTKP 60

                                                                                                                                                                                                                                                                      A chimeric antibody (AAW14934) comprises the Cl and hinge regions of human IgG2 and the C2 and C3 regions of human IgG4 (G2/G4 MAb) and a murine anti-porcine soluble vascular cell adhesion molecule (VCAM) monoclonal antibody (MAb) 2A2 heavy chain variable region sequence (see also AAW14932). The chimeric antibody is specific for porcine VCAM. It is useful for diagnosing human rejection of porcine centransplants and for improving xenotransplantation of porcine cells, tissues and organs into human recipients.
